Z44 - Gin - 44%
GIN —

Vinification

The botanicals, including the pine cones, macerate for 12 hours in the base alcohol. The pine cones are then removed and the mixture is gradually brought up to temperature. The distillation takes place at a temperature of 50 degrees Celsius, which is relatively cold. The alambic has a capacity of 250 liters. After completion of the distillation, an extract of the pine cones is added to the distillate. The whole provides a special florality, with a fresh aftertaste.

Taste

Z44 Gin is an Italian gin from the Dolomites. It is fired by the Roner Distillerie, and brings together alpine herbs and pine cones with floral notes for a balanced whole. Roner processes the pine cones separately after maceration and then adds extracts at the end of the distillation. The result is a fresh, fruity gin with character.
